

## STOBER provides Solutions

Integration of STOBER  
synchronous servo motors and  
synchronous servo geared motors  
with third-party systems

## Are you seeking for high performance motors and geared motors for your application?

No problem, you can integrate STOBER products into third-party drive controller systems, almost *plug-and-play-like*.

Modular design and the large number of variations offer extensive opportunities for customized, compact synchronous servo (geared) motors.

### The advantages:

- Maximum torque from the available volume / high torque to volume ratio
- Excellent dynamic characteristics for maximum machine cycle performance
- Precise speed control

## Are you in the market for a complete STOBER drive solution with advanced electronics?

### No problem, just call on us.

STOBER drive controllers can be used to perfectly fine tune the individual components of a servo axis to your application.

A system solution from STOBER carries long-term cost reduction advantages.

Complete STOBER solution for a multi-axis solution.

SD6 drive controller and MC6 motion controller (panel/pc version) for CODESYS programming software.
