Chapter 3: Timing relays

Index

3 Chapter 3: Timing relays

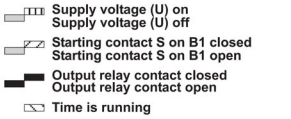
HIQUEL® HIGH QUALITY ELECTRONICS

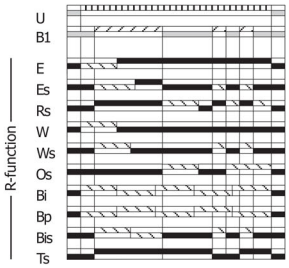
ITM16

overview

- **multi-function timing relay**
- **all common supply voltages on one unit**
- **9 selectable timing ranges (1sec - 10d)**
- **10 selectable timing functions**
- **SPCO configuration**
- **LED indicators for power supply, failure, status of the output relay, control contact & timer**
- **22.5mm DIN rail mount housing**

Multifunction



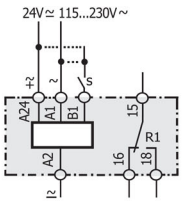


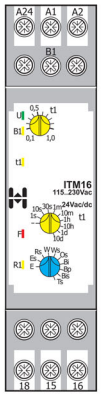
Functions:
E...On delay
Es...On delay with external control input
Rs...Off delay with external control input
W...On pulse single shot
Ws...On pulse single shot with external control input
Os...Off pulse with external control input
Bi...Symmetrical recycler pulse first
Bp...Symmetrical recycler pause first
Bis...Symmetrical recycler pulse first with external control input
Ts...Bistable

Time ranges

1s, 10s, 30s, 1m, 10m, 1h, 10h, 1d, 10d

The required delay time within the range selected is set using the potentiometer on the front.





specification

supply voltage variation	nominal voltage -20%..+10%
frequency range	48 - 63 Hz
duty cycle	100%
repeat accuracy	<1%
output relay specification	max. 6A 230V~
Ue/Ie AC-15	24V/1,5A 115V/1,5A 230V/1,5A
Ue/Ie DC-13	24V/1,5A
expected life time	SPCO
mechanical	10 x 10^6 operations
electrical	1 x 10^5 operations
screws	pozidrive 1
screw tightening torque	0,6..0,8Nm
operating conditions	-20°C bis +60 °C non condensing

* EN 60947-5-1 VDE 0435

ordering information

part no	supply	output	relay type	cULus	housing types
ITM16	24V~= / 115..230V~ 6VA / 1W	SPCO	-	-	L

* The measurement input is galvanically isolated from the power supply

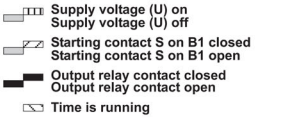
HIQUEL® HIGH QUALITY ELECTRONICS

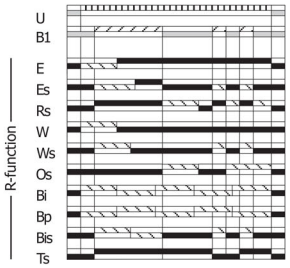
ITM216

overview

- **multi-function timing relay**
- **all common supply voltages on one unit**
- **9 selectable time ranges (1sec - 10d)**
- **3 selectable parallel functions**
- **10 selectable timing functions**
- **2x SPCO configuration**
- **LED indicators for power supply, failure, status of the output relay, control contact & timer**
- **22.5mm DIN rail mount housing**

Multifunction



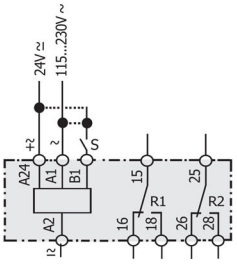


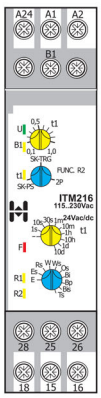
Functions:
E...On delay
Es...On delay with external control input
Rs...Off delay with external control input
W...On pulse single shot
Ws...On pulse single shot with external control input
Os...Off pulse with external control input
Bi...Symmetrical recycler pulse first
Bp...Symmetrical recycler pause first
Bis...Symmetrical recycler pulse first with external control input
Ts...Bistable

Time ranges

1s, 10s, 30s, 1m, 10m, 1h, 10h, 1d, 10d

The required delay time within the range selected is set using the potentiometer on the front.





specification

supply voltage variation	nominal voltage -20%..+10%
frequency range	48 - 63 Hz
duty cycle	100%
repeat accuracy	<1%

* The measurement input is galvanically isolated from the power supply

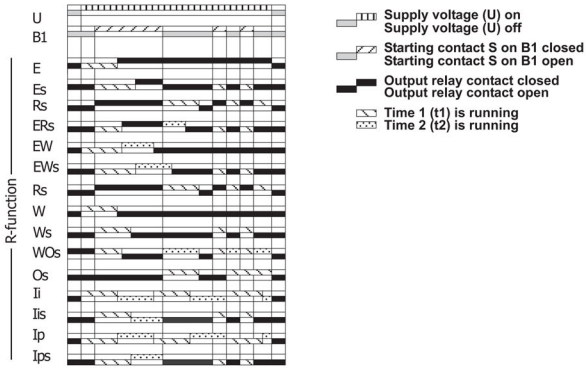
HIQUEL® HIGH QUALITY ELECTRONICS

ITM17

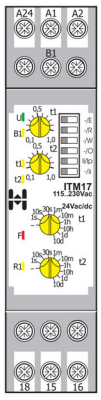
overview

- multi-function timing relay
- all common supply voltages on one unit
- 2 separate timers
- 9 selectable time ranges
- 14 selectable timing functions
- SPCO configuration
- LED indicators for power supply, failure, status of the output relay, control contact and timers
- 22.5mm DIN rail mount housing

Multifunction



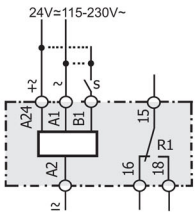
Functions
E...On delay
Es...On delay with external control input
Rs...Off delay with with external control input
ERs...On delay and off delay with external control input
EW...On delay and on pulse / delayed single shot
EWs...On delay and on pulse / delayed single shot with external control input
W...On pulse single shot
Ws...On pulse single shot with external control input
WOs...On pulse and off pulse with external control input
Os...Off pulse with external control input
Ii...Asymmetrical recycler pulse first
Iis...Asymmetrical recycler pulse first with external control input
Ip...Asymmetrical recycler pulse pause first
Ips...Asymmetrical recycler pause first with external control input



Time ranges

1s, 10s, 30s, 1m, 10m, 1h, 10h, 1d, 10d

The required delay time within the range selected is set using the potentiometer on the front plate.



specification

supply voltage variation	nominal voltage -20%..+10%

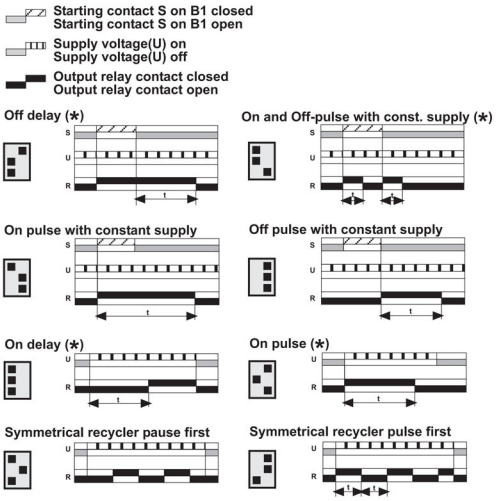
HIQUEL® HIGH QUALITY ELECTRONICS

TM

overview

- **single, dual, multi & zoom supply voltage options**
- **8 timing functions selected by DIP switch**
- **SPCO or DPCO output relay**
- **6 selectable time ranges 0.1sec - 10 Hrs**
- **LED indicators for power supply and relay status**
- **22.5mm DIN rail mount housing or 11pin plug in housing**

Multifunction



Remove supply voltage before making any changes to either time range or timing function.

(*) available T3F functions

A detailed description of each of the timing functions will be found on the following 'single function' type pages.

Time ranges

0,1s-1,0s	1,0s-10s	0,1min-1,0min	1,0min-10min	0,1h-1,0h	1,0h-10h

The required delay time within the range selected is set using the potentiometer on the front plate.

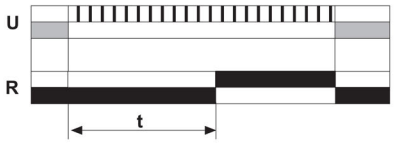
TE/DER

overview

- single or dual supply voltage options
- SPCO or DPCO output relay
- 6 selectable time ranges
- LED indicators for power supply and contact
- 22.5mm DIN rail mount housing or 11pin plug in housing

On delay

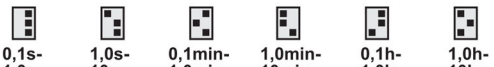
Supply voltage on
Supply voltage off
Output relay contact closed
Output relay contact open



Remove supply voltage before making any changes to either time range or timing function.

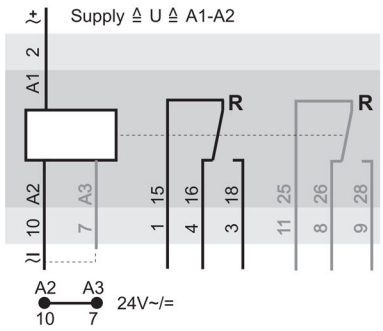
On the application of the supply voltage, time delay ***t*** commences. At the end of the time delay the output relay pulls in. When the supply voltage is removed the output relay drops out and the time relay resets ready for the next timing cycle.
If the supply voltage ist removed during time ***t***, the output relay will drop out, the unexpired time will be cancelled and the time relay will reset.

Time ranges



0,1s-1,0s	1,0s-10s	0,1min-1,0min	1,0min-10min	0,1h-1,0h	1,0h-10h

The time ranges are selected using the DIP switch settings illustrated left, and the required delay time is set using the potentiometer on the front plate.



specification

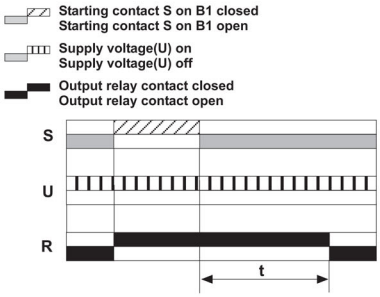
HIQUEL® HIGH QUALITY ELECTRONICS

TR

overview

- **single or dual supply voltage options**
- **SPCO or DPCO output relay**
- **6 selectable time ranges 0.1sec - 10Hrs**
- **LED indicators for power supply and relay status**
- **22.5mm DIN rail mount housing or 11pin plug in housing**

Off delay

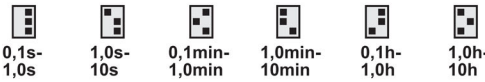


Remove supply voltage before making any changes to either time range or timing function.

On the application of the supply voltage the time relay energises ready for the timing cycle. When the starting contact ***S*** is closed the output relay pulls in immediately. Time delay ***t*** starts when the starting contact is opened and the output relay drops out at the end of the time delay. If the supply voltage is removed before, or during time ***t***, the output relay will drop out immediately and the time relay will reset ready for the next timing cycle.

Important application note:
*On types **TR12,13 & 15** only, small inductive devices (relays etc..), can be connected between the B1 terminal and ground (-ve) such that they energise when the A1-B1 start contact is made. A snubber circuit should be included for larger devices. **Do not do this on types TR01 & 04.***

Time ranges



0,1s-1,0s	1,0s-10s	0,1min-1,0min	1,0min-10min	0,1h-1,0h	1,0h-10h

The time ranges are selected using the DIP switch settings illustrated left, and the required delay time is set using the potentiometer on the front plate.

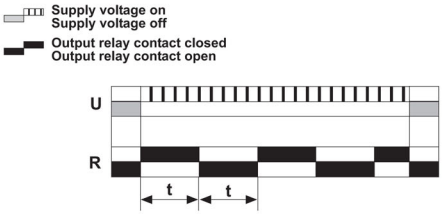
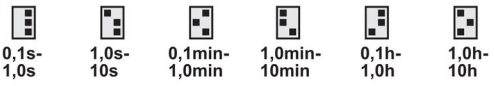
Symmetrical recycler



Remove supply voltage before making any changes toeither time range or timing function.

On the application of the supply voltage the output relay pulls in and timing period ***t*** starts.
At the end of time ***t*** the output relay drops out and remains dropped out for a period equal to time ***t.***
An on-off action with a 1:1 time ratio continues until the supply voltage is removed when the time relay will reset ready for the next timing cycle.
If the supply voltage is removed during an 'On' period the output relay will drop out immediately, the remaining time will be cancelled and the time relay resets ready for the next timing cycle.

Time ranges



0,1s-1,0s	1,0s-10s	0,1min-1,0min	1,0min-10min	0,1h-1,0h	1,0h-10h

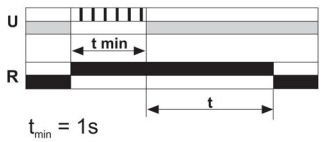
True off delay

Supply voltage on
Supply voltage off

Output relay contact closed
Output relay contact open



t_{min} = 1s

Remove supply voltage before making any changes to either time range or timing function.

On the application of the supply voltage the output relay pulls in. When the supply voltage is removed the output relay remains pulled in and time delay ***t*** commences.
At the end of the time delay the output relay drops out and the time relay resets ready for the next timing cycle.
If the supply voltage is reapplied during time ***t***, time ***t*** will not time out and the output relay wil remain pulled in until the supply voltage is removed for a time longer than ***t***.

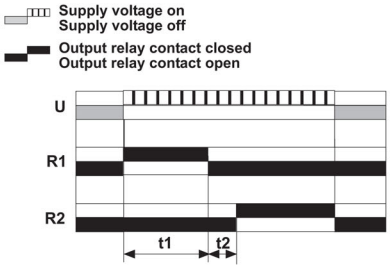
Star-delta start timer

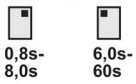


Remove supply voltage before making any changes to either time range or timing function.

On the application of the supply voltage the star relay pulls in immediately for the duration of the star time set.
When the star time expires the star relay drops out and the dwell time begins. At the end of the dwell time the delta relay pulls in.
When the supply voltage is removed the delta relay drops out and the time relay resets ready for the next timing cycle.

Time ranges

star time (=t1) required delay time is set using the potentiometer on the front plate



0,8s-8,0s **6,0s-60s**

dwell time (=t2)

40ms **60ms** **80ms** **100ms**

DES/PES/TES

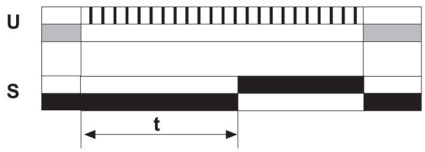
overview

- **supply voltage 12-240V~= or 200-440V~**
- **thyristor output 700mA max.**
- **6 selectable time ranges (DES/PES) 0.1sec - 10Hrs**
- **11.25mm or 22.5mm rail mount housing or 11pin plug in housing**

On delay with thyristor output

Supply voltage on
Supply voltage off

Thyristor open
Thyristor closed



Remove supply voltage before making any changes to either time range or timing function.

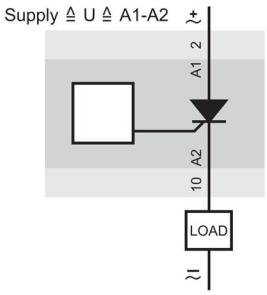
On the application of the supply voltage, time delay ***t*** commences. At the end of the time delay the thyristor switches the full supply voltage through to the load connected to the A2 terminal (max. load 700mA continuous, 20A <10mS).
If the supply voltage is removed during time ***t***, the unexpired time will be cancelled and the timer will reset.

Note:
A small leakage current (2 - 2.5mA) passes through the thyristor during the timing period. Care should be taken to ensure that very sensitive devices connected to the A2 terminal are not affected.

Time ranges (DES/PES)

0,1s-1,0s	1,0s-10s	0,1min-1,0min	1,0min-10min	0,1h-1,0h	1,0h-10h

The required delay time within the range selected is set using the potentiometer on the front plate.



specification

supply voltage variation	nominal voltage +10% / -15%
frequency range	50 - 60 Hz
duty cycle	100%
repeat accuracy	≤ 100% of the selected range
thyristor output	I_{max} = 700mA

DER-M

overview

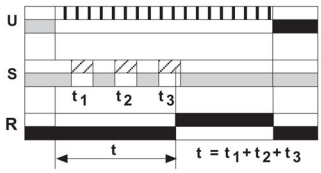
- supply voltage 24-240V~=
- SPCO output relay
- 7 selectable time ranges 0.1sec - 30Hrs
- LED indicators for power supply and relay status
- 22.5mm DIN rail mount housing

On delay with constant supply, contact start, contact interruptible

Starting contact S at B1 closed
Starting contact S at B1 open

Supply voltage(U) on
Supply voltage(U) off

Output relay contact closed
Output relay contact open



Remove supply voltage before making any changes to either time range or timing function.

On the application of the supply voltage the time relay energises ready for the timing cycle.
When the starting contact ***S*** is closed the time delay starts.
At the end of the time delay the output relay pulls in.
If the start contact is opened during time ***t*** the time delay pauses and recommences when the start contact is closed.
When the supply voltage is removed the output relay drops out and the time relay resets ready for the next timing cycle.
If the supply voltage is removed during time ***t***, the output relay will drop out, the unexpired time will be cancelled and the time relay will reset.
This time relay can be energised with the start contact closed in which case the on-delay time period will start immediately in the same way.

Time ranges

0,1s-1,0s	1,0s-10s	0,1min-1,0min	1,0min-10min	0,1h-1,0h	1,0h-10h	3,0h-30h

PLC interface relay in 11.25mm housing

HIQUEL® HIGH QUALITY ELECTRONICS

SW1/SW2/SW3

overview

- **coil voltage 24V~=**
- **SPCO output max. 10A**
- **trigger input with 1/0/Auto switch**

SW1	**3,0V ON**	**2,5V OFF**
SW2	**7,0V ON**	**6,5V OFF**
SW3	**2,0V ON**	**1.5V OFF**

- **LED indicators for output**
- **11.25mm DIN rail mount housing**

SW1/SW2/SW3:

The SW triggers are designed to control pumps, fans, burners etc. They are also designed to operate with an analogue 0-10VDC control signal.

Trigger Function
As soon as the input voltage reaches the operating threshold (ON), in AUTO Mode, the relay pulls in.
If the input voltage falls below the cut off threshold (OFF), the relay drops out again.
A manual control facility with feedback contact, (mode 1) is incorporated for manual operation

The module can be operated in two modes which can be selected by the three-position switch (Auto, 0, 1).

1. Switch position “1”: The output relay is controlled via terminals A1, A2
2. Switch position “Auto”: The output relay is controlled by the trigger through terminals YR. The operating voltage must be available continuously at terminal A1.
3. Switch position “0”: The relay is switched off. Input signals at terminals A1 or YR are ineffective.

HIQUEL® HIGH QUALITY ELECTRONICS

ANU/ANI

overview

- **supply voltage 24V~=**
- **feedback contact for manual or automatic mode**
- **protection against incorrect connection**
- **short circuit protection**
- **LED indicator proportional to output level**
- **22.5mm DIN rail mount housing**

Description:

ANU/ANI are used with automatic control systems (BMS, PLC, PC) that provide a 0-10V or 0-20mA signal for controlling variables such as temperature, speed, position etc.

In automatic mode (“Auto”) the analogue signal from the control system (terminals YR & ⊥) is re-transmitted to the controlled device (ratio 1:1).

In manual mode (“Manu”) the analogue signal from the control system is isolated and the ANU/ANI inject a signal (terminals Y & ⊥) which can be adjusted from 0 to 10V or 0-20mA by the potentiometer.

The switch position (mode) can be monitored externally on terminals S1 - S2 (feed-back contact).

The brightness of the LED “Y” is proportional to the output signal level.

The output is short circuit protected.

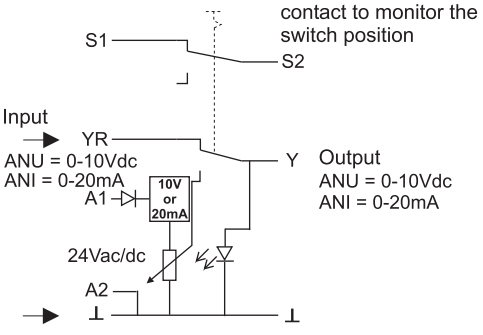
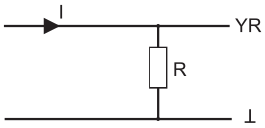
ANU



A1 - A2: Supply voltage



Application with ANU: Input 0-20mA; Output 0-10Vdc

Current input with external resistor is possible.
z.B.: 0-20mA and R = 500 Ohm
terminal YR to terminal ⊥= 0 - 10V

HIQUEL® HIGH QUALITY ELECTRONICS

LSM

overview

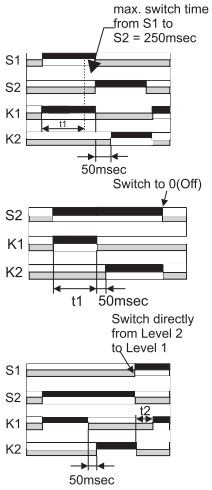
- **power supply 230V~**
- **2 adjustable timers**
- **2 relay outputs 230V~**
- **LED indicators for level 1+2**
- **22.5mm DIN rail mount housing**

Description:

The LSM was designed specifically to control two-speed fan motors. The LSM is controlled by a two-position switch, which is connected directly to the LSM (S1, S2). The motor contactors are controlled by the two outputs (K1, K2).

The LSM will automatically control the speed selection so that the operator cannot switch the fan on from stand-still to high speed, or off when running in high speed.

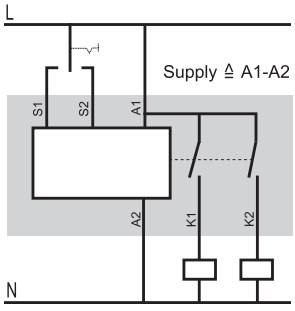
The 3 functions are:

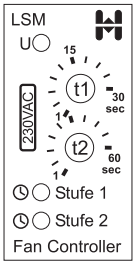


1.) In switch position 1 the motor will run in low speed during the set time t1. After the time t1 has expired it is possible to switch over to position 2 for high speed.
The switch over time is max. 250 msec. If this is exceeded the LSM goes to function 2.

2.) If switch position 2 (high speed) is selected before switch position 1, the motor will be forced to run for the time t1(low speed).
After t1 there will be an interval of 50 msec before the motor goes into high speed.

3.) Once in high speed, if the input is switched from position 2 to position 1 Or 0 (=stop), the high speed contact will switch off and the motor will be free wheel for the duration of timer t2 after which the low speed contact will switch on if the switch is in position 1, or will coast to a stop if switch position 0 is selected.





specification

supply voltage varation		nominal voltage +10% / -15%

HIQUEL® HIGH QUALITY ELECTRONICS

MU-PT100/PT1000

overview

- temperature to analogue signal transducer
- high linearity, long term stability, high accuracy
- 4 selectable temperature ranges
- current and voltage outputs
- 2, 3 or 4 wire PT sensor connections
- 22.5 or 45mm DIN rail mount housing

Description

The offset of the output signal is selected with the first DIP switch, the measurement range is selected with the other two DIP switches.

The different probe connection types are detected automatically.

The use of shielded and twisted-pair cable is recommended. Connect the shield of the cable (if used) to the connector "I-". "U+"/"U-" and "I+/"I-" are twisted together (if twisted cable used).

Do not lay the PT probe cable close to supply voltage cables.

HIQUEL® HIGH QUALITY ELECTRONICS

MU-TC

overview

- thermocouple to analogue signal transducer
- supply voltage 24Vdc
- high linearity, long term stability
  high temperature stability
- selectable thermocouple input
- 23mm DIN rail mount housing

Description:

MU-TC uses microprocessor-controlled high resolution 16-bit dual-slope, integrating A/D converter to acquire a thermocouple signal and cold junction compensation input.

The configurable input offers a wide range of J, K, T, R, S, E, B type thermocouples and the output is linear to temperature. Therefore, stock investment for spare parts can be reduced and the highest system flexibility can be achieved.
